R Markdown
Including Plots

R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see http://rmarkdown.rstudio.com.

The document has parameters that can be determined by the URL served to the Shiny application. The defaults are defined in each document. The parameter labels must be strings, not numeric values (e.g. "one" is acceptable but "1" is not). Here are the parameters for this document:

Parameter	Value
ref.one	0
one	1
two	2
three	15
four	200
five	10
manual	100

You can change these parameters by changing the URL, for instance try to visit: https://ericscheier.shinyapps.io/qualtricsreports/?one=10&two=20&three=30&four=40&five=50
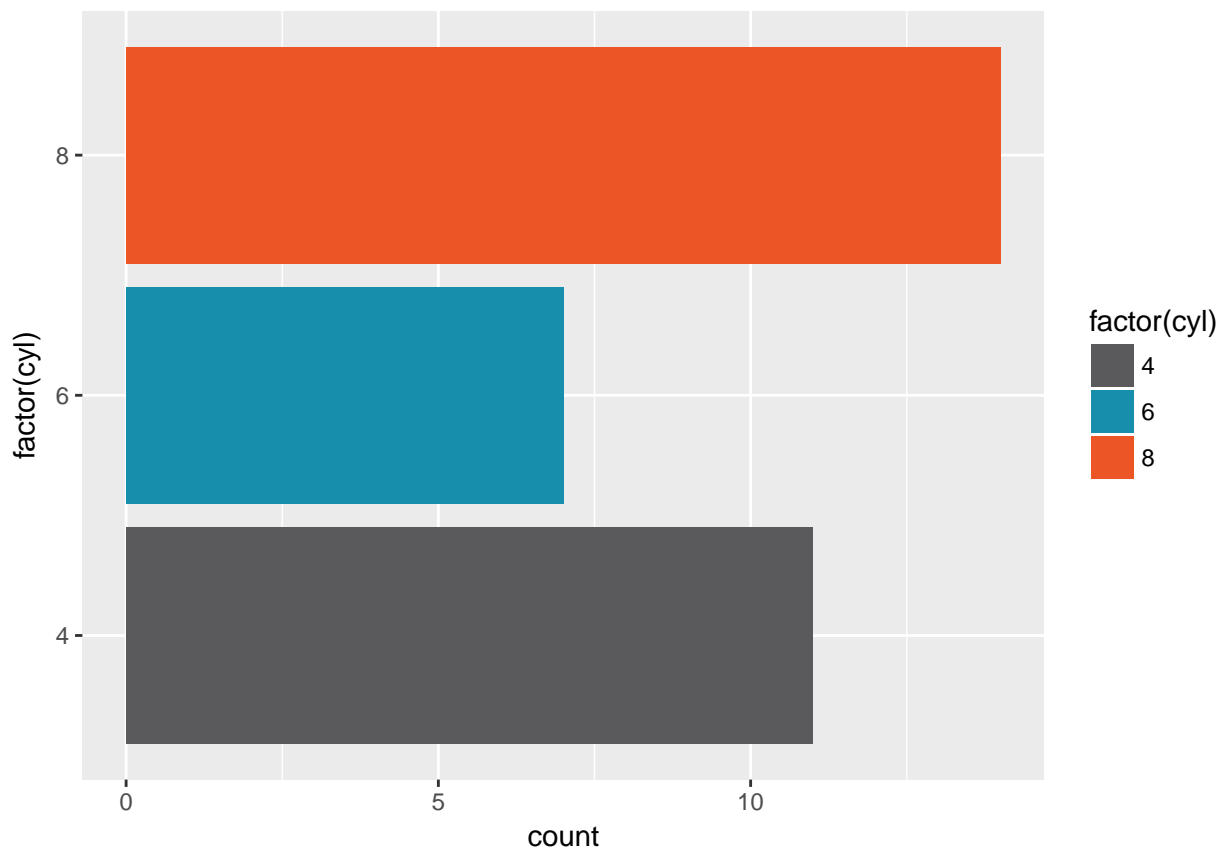

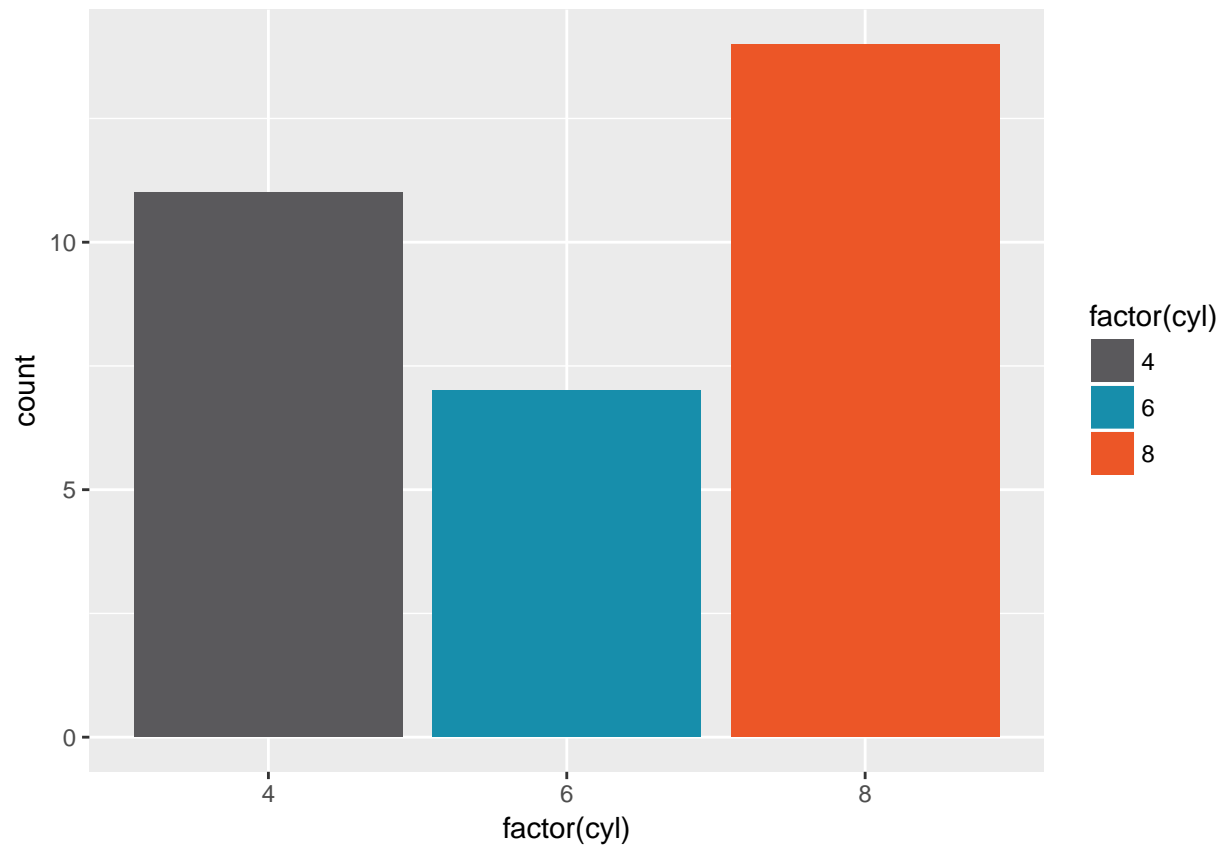

When you click the download or email buttons to the left, a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
# code is shown for reference but can be hidden using echo=FALSE
params$one + params$two + params$three + params$four
```
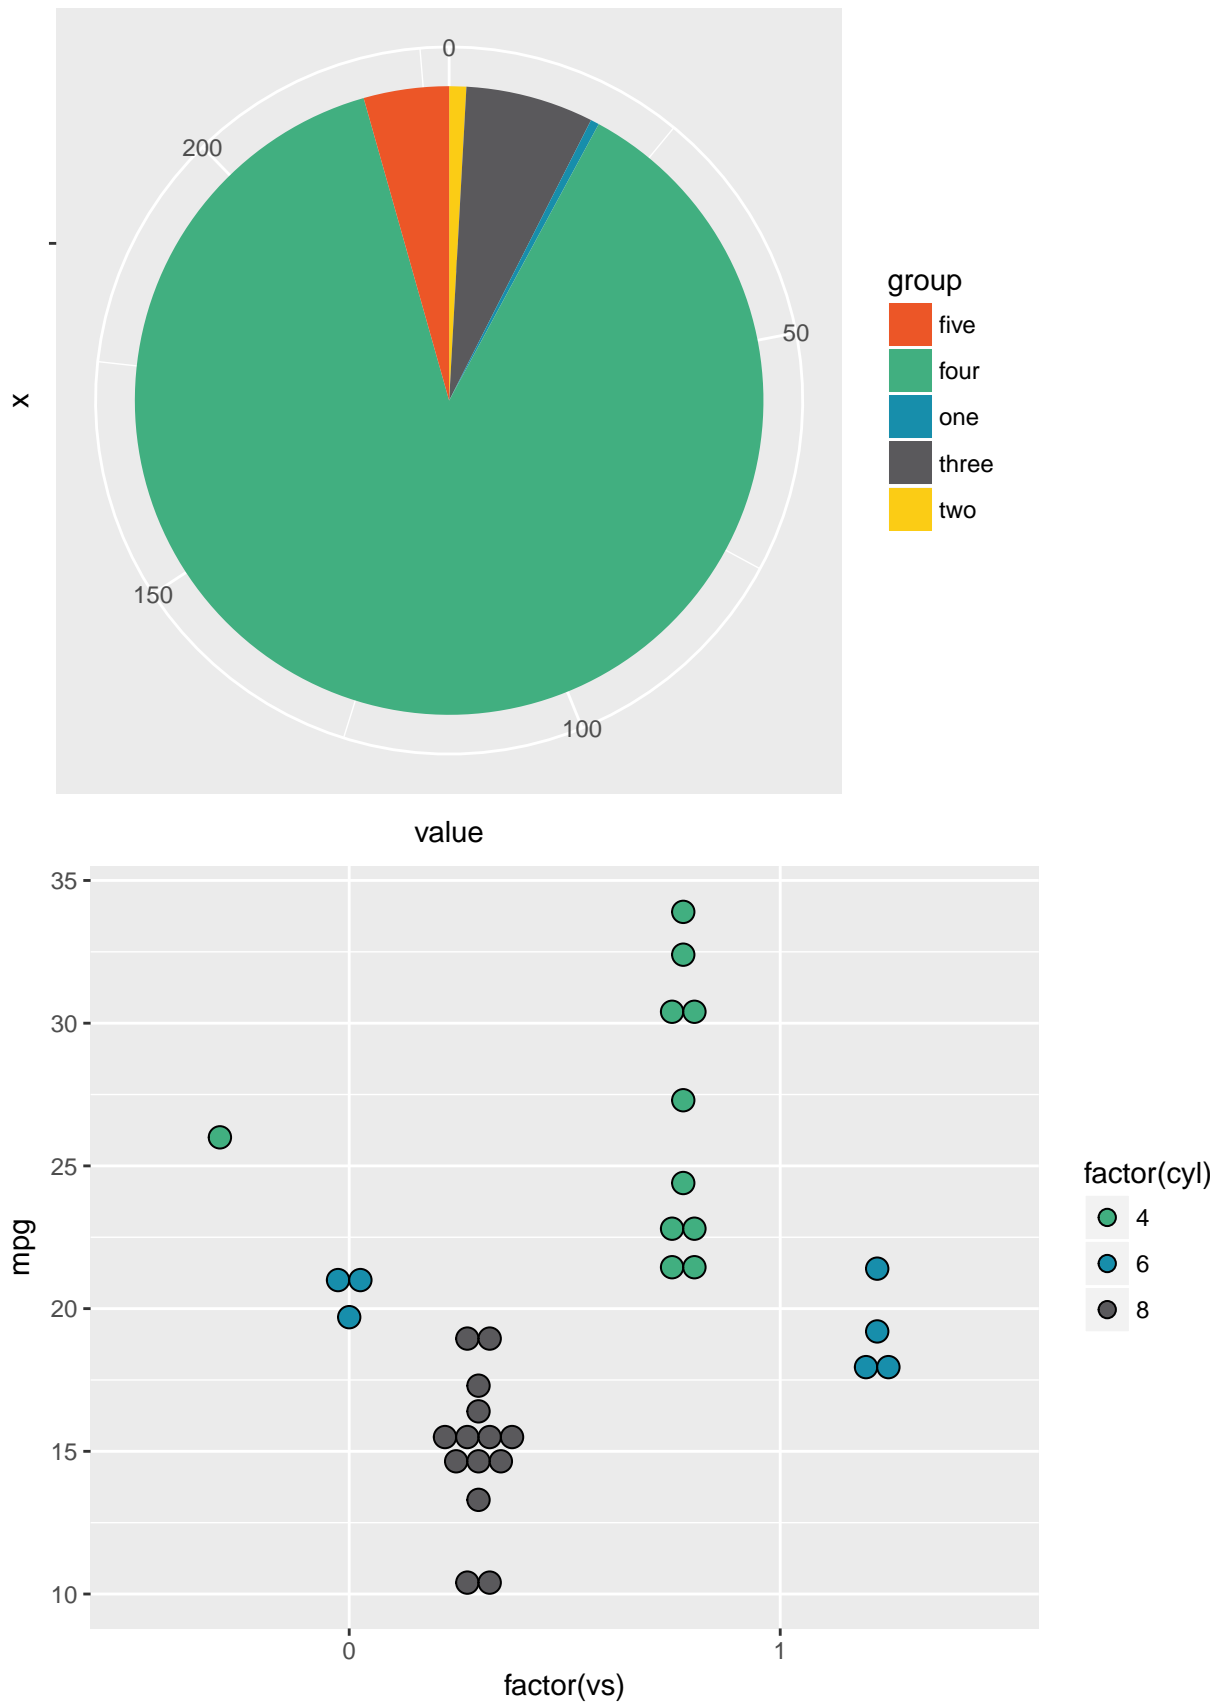

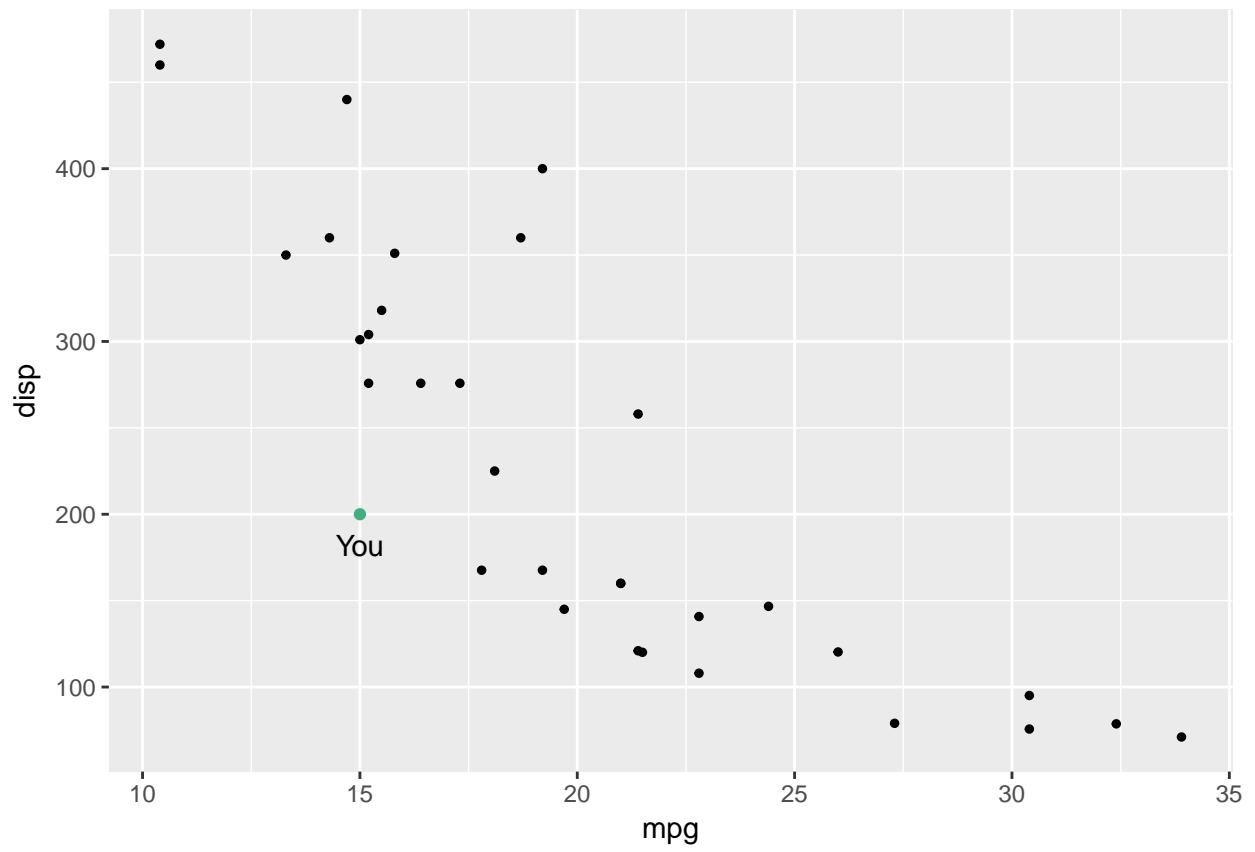

```
## [1] 218
```

Including Plots

You can also embed plots, for example:
